#### FACILITY INFORMATION

### Description

Brigham Young University Idaho (BYUI, formerly Ricks College) is a four-year private university. Emissions units and activities include the central heating plant boilers, a natural gas-fired combustion turbine, emergency IC engines, coating operations, laboratories, welding operations, and storage tanks.

The Central Heating Plant was initially constructed in 1963 and included Boilers No. 1 and 2. Boiler No. 3 was added in 1966, and Boiler No. 4 was added in 1973. Boiler No. 1 was removed in 2001, the same year that Boiler No. 5 was installed. Boilers No. 2, 3, and 4 are coal-fired units, and Boiler No. 5 is a multi-fuel boiler capable of burning distillate fuel oil or gas. The ash handling system is used to transport and remove coal ash generated by the boilers.

Emergency generators located throughout the campus provide electric power when line power is not available. Welding and spray paint coating operations are used for facility maintenance purposes, including the installation, building, and repair of new equipment or structures (e.g., welding for the building and repair of stage sets at the Drama location).

In 2014-2015 the facility replaced the three existing coal-fired boilers, Boilers No. 2, 3, and 4, with two new natural gas-fired boilers, new Boilers No. 2 and 3, retrofitted existing Boiler No. 5 (which is now known as new Boiler No. 4) with a new natural gas-fired burner, and installed a natural gas-fired combustion turbine with a heat recovery steam generator (HRSG) with a duct burner. During the construction project, Boiler No. 4 was retrofitted with a lower heat input burner than was proposed in the application and permitted. In addition, the diameter of the HRSG bypass stack installed was larger than originally proposed and modeled.

## Permitting History

The following information was derived from a review of the permit files available to DEQ. Permit status is noted as active and in effect (A) or superseded (S).

November 18, 2016	P-2013.0057, Permit the "as installed" Boiler No. 4 and HRSG bypass stack diameter and modeled additional operation scenarios for the gas turbine and duct burners, Permit status (A, but will become S upon issuance of this permit)
November 6, 2014	P-2013.0057, Replacement of three existing coal-fired boilers with two new natural gas-fired boilers, the retrofitting of one existing coal-fired boiler with a natural gas-fired burner, the installation of a new natural gas-fired combustion turbine with a duct burner and a heat recovery steam generator (HRSG), and the installation of four new emergency IC engines (two of which were previously installed), Permit status (S)
November 15, 2013	T2-2009.0031, Discontinue use of the No. 4 boiler, Permit status (S)
June 2, 2009	T2-2009.0031, T2/PTC renewal and modification to increase Boiler Nos. 2-4 annual fuel combustion limit, replace one emergency generator, add one emergency generator, add three spray booths, and add welding operations, Permit status (S)
February 12, 2007	PTC/T2 No. P-060500, T2/PTC modification to increase the allowable sulfur content of coal used in Boiler Nos. 2-4, reduce the allowable sulfur content of No. 2 fuel oil used in Boiler No. 5, replace three emergency generators, and add three emergency generators, Permit status (S)
April 9, 2003	PTC/T2 No. T2-010511, T2/PTC renewal and modification to replace Boiler No. 1 with Boiler No. 5, and to incorporate synthetic minor limits, Permit status (S)
August 12, 1996	T2 No. 065-00011 (9506-078-2), initial T2 operating permit, Permit status (S)
September 4, 1990	PTC No. 1000-0011-001, PTC to construct four coal-fired boilers, Permit status (S)

Page 5

## **Application Scope**

This project is for a revision to the PTC at an existing minor facility.

The applicant has proposed to remove five emergency IC engines powering electrical generators from PTC number P-2013.0057. The five emergency IC engines are Engine 40014 in the Austin Tech Building, Engine 40004 in the Romney Building, Engine 40031 in the McKay Library, Engine 40013 in the Benson Building, and Engine 40020 in the Smith Building.

## Application Chronology

August 26, 2019	DEQ received an application and an application fee.
August 28, 2019	DEQ determined that the application was complete.
September 4, 2019	DEQ made available the draft permit and statement of basis for peer and regional office review.
September 11, 2019	DEQ made available the draft permit and statement of basis for applicant review.
September 20, 2019	DEQ received the permit processing fee.
October 2, 2019	DEQ issued the final permit and statement of basis.

#### **TECHNICAL ANALYSIS**

## **Emissions Units and Control Equipment**

Table 1 EMISSIONS UNIT AND CONTROL EQUIPMENT INFORMATION

Source ID No.	Sources	Control Equipment	Emission Point ID No.
SB-2	Boiler No. 2: Manufacturer: Cleaver Brooks Model: Type "O" Burner Mfg.: Natcom Burner Model: NOS-2-54 Installation Date: 2014 Heat input rating: 55.0 MMBtu/hr Primary Fuel: Natural gas Backup Fuel: ULSD fuel	N/A	BLR2: Exit height: 80.0 ft (24.38 m) Exit diameter: 3.35 ft (1.02 m) Exit flow rate: 15,255 acfm Exit temperature: 317 °F (158.3 °C)

ASB	Austin Spray Booth: Campbell Housefield HVLP spray gun, 1.5 gal/hr capacity	Pre-filter and filter system HVLP spray gun	Austin Spray Booth exhaust stack

#### **Emissions Inventories**

#### **Potential to Emit**

IDAPA 58.01.01 defines Potential to Emit as the maximum capacity of a facility or stationary source to emit an air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the facility or source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is state or federally enforceable. Secondary emissions do not count in determining the potential to emit of a facility or stationary source.

The BYUI facility is an existing minor source. The emissions inventory is taken from the application submitted on June 6, 2015 that was used to develop P-2013.0057 issued on November 18, 2016.

#### **Pre-Project Potential to Emit**

Pre-project Potential to Emit is used to establish the change in emissions at a facility as a result of this project.

The following table presents the pre-project potential to emit for all criteria pollutants from all emissions units at the facility. See Appendix A for a detailed presentation of the calculations of these emissions for each emissions unit.

Table 2 PRE-PROJECT POTENTIAL TO EMIT FOR REGULATED AIR POLLUTANTS

a) Controlled average emission rate in pounds per hour is a daily average, based on the proposed daily operating schedule and daily limits.

#### Post Project Potential to Emit

Post project Potential to Emit is used to establish the change in emissions at a facility and to determine the facility's classification as a result of this project. Post project Potential to Emit includes all permit limits resulting from this project.

The following table presents the post project Potential to Emit for criteria pollutants from all emissions units at the facility as determined by DEQ staff. See Appendix A for a detailed presentation of the calculations of these emissions for each emissions unit.

Table 3 POST PROJECT POTENTIAL TO EMIT FOR REGULATED AIR POLLUTANTS

Post Project Totals	11.36	9.95	3.83	1.24	112.19	76.30	32.01	62.02	44.52	86.12

a) Controlled average emission rate in pounds per hour is a daily average, based on the proposed daily operating schedule and daily limits.

#### **Change in Potential to Emit**

The change in facility-wide potential to emit is used to determine if a public comment period may be required and to determine the processing fee per IDAPA 58.01.01.225. The following table presents the facility-wide change in the potential to emit for criteria pollutants.

Table 4 CHANGES IN POTENTIAL TO EMIT FOR REGULATED AIR POLLUTANTS

	PM <sub>10</sub> /PM <sub>2.5</sub>		SO <sub>2</sub>		NO <sub>X</sub>		CO		VOC	
Source	lb/hr	T/yr	lb/hr	T/yr	lb/hr	T/yr	lb/hr	T/yr	lb/hr	T/yr
Pre-Project Potential to Emit	12.03	10.12	4.51	1.41	124.29	79.32	34.32	62.60	46.42	86.60
Post Project Potential to Emit	11.36	9.95	3.83	1.24	112.19	76.30	32.01	62.02	44.52	86.12
Changes in Potential to Emit	-0.67	-0.17	-0.68	-0.17	-12.10	-3.02	-2.31	-0.58	-1.90	-0.48

#### **TAP and HAP Emissions**

As a result of the removal of five emergency IC engines, the TAP and HAP emissions slightly decreased as a result of this project.

### Ambient Air Quality Impact Analyses

An ambient air quality impact analysis was not required for this project as there is a decrease in emissions and no proposed emissions increases at the facility.

#### **REGULATORY ANALYSIS**

#### Attainment Designation (40 CFR 81.313)

The facility is located in Madison County, which is designated as attainment or unclassifiable for PM<sub>2.5</sub>, PM<sub>10</sub>, SO<sub>2</sub>, NO<sub>2</sub>, CO, and Ozone. Refer to 40 CFR 81.313 for additional information.

## Facility Classification

The AIRS/AFS facility classification codes are as follows:

For HAPs (Hazardous Air Pollutants) Only:

- A = Use when any one HAP has permitted emissions > 10 T/yr or if the aggregate of all HAPS (Total HAPs) has permitted emissions > 25 T/yr.
- SM80 = Use if a synthetic minor (uncontrolled HAPs emissions are > 10 T/yr or if the aggregate of all uncontrolled HAPs (Total HAPs) emissions are > 25 T/yr and permitted emissions fall below applicable major source thresholds) and the permit sets limits > 8 T/yr of a single HAP or ≥ 20 T/yr of Total HAPs.
- SM = Use if a synthetic minor (uncontrolled HAPs emissions are > 10 T/yr or if the aggregate of all uncontrolled HAPs (Total HAPs) emissions are > 25 T/yr and permitted emissions fall below applicable major source thresholds) and the permit sets limits < 8 T/yr of a single HAP and/or < 20 T/yr of Total HAPs.

b) Controlled average emission rate in tons per year is an annual average, based on the proposed annual operating schedule and annual limits.

B = Use when the potential to emit (i.e. uncontrolled emissions and permitted emissions) are below the 10 and 25 T/yr HAP major source thresholds.

UNK = Class is unknown.

#### For All Other Pollutants:

A = Use when permitted emissions of a pollutant are > 100 T/yr.

SM80 = Use if a synthetic minor for the applicable pollutant (uncontrolled emissions are > 100 T/yr and permitted emissions fall below 100 T/yr) and permitted emissions of the pollutant are ≥ 80 T/yr.

SM = Use if a synthetic minor for the applicable pollutant (uncontrolled emissions are > 100 T/yr and permitted emissions fall below 100 T/yr) and permitted emissions of the pollutant are < 80 T/yr.

B = Use when the potential to emit (i.e. uncontrolled emissions and permitted emissions) are below the 100 T/yr major source threshold.

UNK = Class is unknown.

Table 5 REGULATED AIR POLLUTANT FACILITY CLASSIFICATION

Pollutant	Uncontrolled PTE (T/yr)	Permitted PTE (T/yr)	Major Source Thresholds (T/yr)	AIRS/AFS Classification
PM	14.07	9.95	100	В
PM <sub>10</sub>	14.07	9.95	100	В
PM <sub>2.5</sub>	14.07	9.95	100	В
$SO_2$	1.57	1.24	100	В
$NO_X$	105.65	76.30	100	SM
CO	82.29	62.02	100	В
VOC	89.02	86.12	100	В
HAP (single)	<10	0.42a	10	В
Total HAPs	<25	0.241 <sup>a</sup>	25	В

a) As discussed previously there was a small decrease in HAPs emissions as a result of this project. Therefore, the HAP PTEs were taken from the previous permitting project.

## Permit to Construct (IDAPA 58.01.01.201)

IDAPA 58.01.01.201 ...... Permit to Construct Required

The permittee has requested that a PTC be issued to the facility for the modified emissions source. Therefore, a permit to construct is required to be issued in accordance with IDAPA 58.01.01.220. This permitting action was processed in accordance with the procedures of IDAPA 58.01.01.200-228.

### Tier II Operating Permit (IDAPA 58.01.01.401)

IDAPA 58.01.01.401 .....Tier II Operating Permit

The application was submitted for a permit to construct (refer to the Permit to Construct section), and an optional Tier II operating permit has not been requested. Therefore, the procedures of IDAPA 58.01.01.400–410 were not applicable to this permitting action.

## Visible Emissions (IDAPA 58.01.01.625)

The sources of PM emissions at this facility are subject to the State of Idaho visible emissions standard of 20% opacity. This requirement is assured by Permit Conditions 2.4, 3.4, 4.3, and 5.4.

### Standards for New Sources (IDAPA 58.01.01.676)

IDAPA 58.01.01.676 ......Standards for New Sources

The fuel burning equipment located at this facility, with a maximum rated input of ten (10) million BTU per hour or more, are subject to a particulate matter limitation of 0.015 gr/dscf of effluent gas corrected to 3% oxygen by volume when combusting gaseous fuels. Fuel-Burning Equipment is defined as any furnace, boiler, apparatus, stack and all appurtenances thereto, used in the process of burning fuel for the primary purpose of producing heat or power by indirect heat transfer. This requirement is assured by Permit Conditions 2.5, 3.5 and 4.4.

#### Title V Classification (IDAPA 58.01.01.300, 40 CFR Part 70)

IDAPA 58.01.01.301 ......Requirement to Obtain Tier I Operating Permit

Post project facility-wide emissions from this facility do not have a potential to emit greater than 100 tons per year for PM<sub>10</sub>, PM<sub>2.5</sub>, SO<sub>2</sub>, NO<sub>X</sub>, CO, and VOC or 10 tons per year for any one HAP or 25 tons per year for all HAP combined as demonstrated previously in the Emissions Inventories Section of this analysis. Therefore, the facility is not a Tier I source in accordance with IDAPA 58.01.01.006 and the requirements of IDAPA 58.01.01.301 do not apply.

## PSD Classification (40 CFR 52.21)

40 CFR 52.21 ......Prevention of Significant Deterioration of Air Quality

The facility is not a major stationary source as defined in 40 CFR 52.21(b)(1), nor is it undergoing any physical change at a stationary source not otherwise qualifying under paragraph 40 CFR 52.21(b)(1) as a major stationary source, that would constitute a major stationary source by itself as defined in 40 CFR 52. Therefore in accordance with 40 CFR 52.21(a)(2), PSD requirements are not applicable to this permitting action. The facility is not a designated facility as defined in 40 CFR 52.21(b)(1)(i)(a), and does not have facility-wide emissions of any criteria pollutant that exceed 250 T/yr.

## NSPS Applicability (40 CFR 60)

Because the facility has three boilers, a gas turbine, and CI emergency IC engines, the following NSPS requirements apply to this facility:

- 40 CFR 60, Subpart Dc Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units
- 40 CFR 60, Subpart IIII Standards of Performance for Stationary Compression Ignition Internal Combustion Engines
- 40 CFR 60, Subpart KKKK Standards of Performance for Stationary Combustion Turbines

There was no change in the applicability analyses for Subparts Dc, IIII, and KKKK as a result of this project. Therefore, refer to the Statement of Basis for project 61299 for the analyses Subparts Dc and IIII and project 61532 for Subpart KKKK. DEQ is delegated for all three Subparts.

# NESHAP Applicability (40 CFR 61)

The facility is not subject to any NESHAP requirements in 40 CFR 61.

## MACT/GACT Applicability (40 CFR 63)

The facility operates as a minor source of hazardous air pollutant (HAP) emissions, and because the facility has boilers, CI emergency IC engines, and paint spray booths installed at the facility, the following NESHAP requirements apply to this facility:

• 40 CFR 63, Subpart ZZZZ - National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines

- 40 CFR 63, Subpart HHHHHH National Emissions Standards for Hazardous Air Pollutants: Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources
- 40 CFR 63, Subpart JJJJJJ National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers Area Sources

There was no change in the applicability analyses for Subparts ZZZZ, HHHHHHH, and JJJJJJ as a result of this project. Therefore, refer to the Statement of Basis for project 61299 for the analyses of these three subparts. DEQ is delegated for all three Subparts.

#### **Permit Conditions Review**

This section describes the permit conditions that have been added, revised, modified or deleted as a result of this permitting action.

Table 1.1 and Table 4.1 were updated to remove the emergency IC engine No. 40014 at the Austin Tech Building, engine No. 40004 at the Romney Building, engine No. 40031 at the McKay Library, engine No. 40013 at the Benson Building, and engine No. 40020 at the Smith Building.

Permit Condition 2.26 was revised to reference Subpart Dc and not Subpart IIII.

The heading regarding the Subpart ZZZZ requirements before Permit Condition 4.12 was updated to remove the emergency IC engines referenced as removed from Tables 1.1 and 4.1.

#### **PUBLIC REVIEW**

## **Public Comment Opportunity**

Because this permitting action does not authorize an increase in emissions, an opportunity for public comment period was not required or provided in accordance with IDAPA 58.01.01.209.04 or IDAPA 58.01.01.404.04.

# **APPENDIX B - FACILITY DRAFT COMMENTS**

The facility had no comments on the draft permit on September 26, 2019.

# APPENDIX C - PROCESSING FEE

# **PTC Processing Fee Calculation Worksheet**

#### Instructions:

Fill in the following information and answer the following questions with a Y or N. Enter the emissions increases and decreases for each pollutant in the table.

Company: Brigham Young University Idaho

Address: 525 S. Center St.

City: Rexburg State: Idaho

Zip Code: 83460

Facility Contact: Sam Merrick

Title: HVAC Services Manager

AIRS No.: 065-00011

N	Does this facility qualify for a general permit (i.e. concrete batch plant, hot-mix asphalt plant)? Y/N
Y	Did this permit require engineering analysis? Y/N
. N	Is this a PSD permit Y/N (IDAPA 58.01.01.205.04)

	Emissions Inv	entory	1
